EDUCATION

Oakland Community College

Associate in Applied Science, Computer Information Systems – Software Engineering, Game Design Focus.

Expected 2027

EXPERIENCE

Technology Intern

Mar 2026 – Present

Black Tech Saturdays

- Built and shipped an internal full-stack Python/Django web application with an HTML/CSS/JavaScript interface, integrating Greenhouse, SAM.gov, and Grants.gov APIs to automate sourcing and verification for a 200+ listing job/contract database.
- Automated end-to-end cohort management by building a 6-table Airtable base with 10 email automations, custom RSVP forms, and branded email copy, streamlining applicant and speaker workflows across 3 program tracks.
- Produced two AI-assisted community event guides totaling 80+ curated listings with verified RSVP links, performer lineups, and venue data to drive site traffic and establish Black Tech Saturdays as a go-to Detroit resource.

PROJECTS

Storytelling

Full Stack SaaS Application

- Built and deployed a full-stack SaaS writing platform using React, Node.js, Express, and PostgreSQL with cloud sync.
- Integrated Stripe subscription billing with webhook event handling and Clerk authentication with multi-tenant user isolation.
- Built an AI writing assistant using the Anthropic API, gated behind the Pro subscription tier.
- Wrote a Vitest test suite that caught and fixed a real 500 to 400 error on POST /api/projects.
- Compiled manuscripts to PDF, DOCX, and EPUB formats using jsPDF and docx libraries.
- Packaged the app as a native macOS desktop app using Tauri (Rust), with custom icon, build pipeline, and installer.

MovieMate

Movie & TV Watchlist Web App

- Built the frontend and backend for a full-stack web app using HTML, CSS, and JavaScript, integrating a third-party REST API to fetch and display live movie and TV data for a 5-person team.
- Designed a client-side authentication and watchlist system using LocalStorage, with user accounts, sorting, and data persistence.
- Diagnosed and resolved a production bug from a team merge conflict by tracing the issue through browser dev tools and Git history.
- Managed GitHub version control for the team, including branching, pull requests, and deployment via GitHub Pages.

TypeLocal

Python, PyObjC, Ollama

- Built a macOS menu bar app delivering system-wide, offline predictive text suggestions powered by a locally-run LLM (Ollama), using the Accessibility API for real-time text detection across native apps.
- Implemented a CGEventTap for OS-level keyboard interception and packaged the app with py2app, with zero cloud dependency.

SKILLS

Languages: Python, JavaScript, Java, HTML/CSS

Frameworks & Libraries: React, Node.js, Django, Express, Vite, TipTap

Databases: PostgreSQL, Prisma

Dev Tools & Platforms: Git/GitHub, VS Code, Railway, Terminal, py2app

AI/ML Tools: Anthropic API, Ollama, Open WebUI

Payments & Auth: Stripe, Clerk

Desktop: Tauri (Rust)

macOS/Systems: Accessibility API, CGEventTap, PyObjC, AppKit
